Commercial Electricity and Gas Procurement Specialist

National Energy is a commercial electricity and gas procurement specialist. Our team have many years experience and a proven track record in reducing energy costs for businesses all around Ireland. National Energy creates tailor made energy procurement strategies to suit your business needs no matter what size your business is. Our main goal is to reduce our client's energy costs, while giving you transparent saving reports so you can track your results.

Mission Statement

"We want our customers to have peace of mind that they are saving money on a daily basis and that they have a professional expert in the electricity and gas sector managing their energy procurement. Our transparent savings reports and focused service delivery team are key to fulfilling our Mission."

Services for Real Estate Managers

Energy and Sustainability

National Energy is the leading provider of Energy and Sustainability (E&S) expertise, supporting management companies, occupiers and developers. We help our clients navigate energy options, reduce operating costs, improve energy efficiency and reliability, and mitigate risk.

Taking a holistic approach to energy sustainability, our team develops strategies that not only significantly reduce carbon footprints, but also create long-term benefits and value for your business.

As Ireland's leading provider of commercial real estate energy procurement services, we're different from other energy and sustainability advisors. Supported by our extensive knowledge and experience of energy management, we have a unique real estate focus that enables us to quickly understand your exact requirements and provide creative yet practical sustainable energy solutions.

Services for occupiers

We have developed a program to optimise the supply, demand and usage of energy. That means we support businesses from the development of an energy procurement strategy through to reducing costs and emissions across buildings and portfolios, and finally, ensuring compliance with environmental legislation while improving the value of their assets.

With this three-pronged energy & sustainability approach, we have been able to support 500+ clients, manage €1B in utilities spend, save €95M and reduce 70M kg CO₂e – the equivalent to 1.8M planted trees.

Services for Management Companies

Management Companies draw on our energy expertise to provide a comprehensive service, from developing sustainability strategy to improving building performance, enhancing reputation through reporting and certifications to reducing risk around legislation and obsolescence.

Our team helps management companies to ensure regulatory compliance, mitigate price risk and create energy savings with access to the latest research and analysis.

Energy and Sustainability services cover:

- Sustainability strategy and consulting
- Energy performance improvement
- Energy management
- Energy procurement
- Green building certification
- Compliance and risk management
- Energy projects development and finance
- Carbon and ESG reporting
- Stakeholder engagement
- Specialist consulting for the property management sector

Dedicated Account Management

Firstly, when you start saving with National Energy, you will be assigned a dedicated key account manager including all contact details.

We then create a database for your business site(s) which allows us to answer any questions you may have about your invoice such as; meter reads, tariff changes, carbon output, consumption, pass-through charges or to simply know how much you saved on a particular month. Your assigned key account manager can handle most of your invoice questions, no more waiting in line to get through to a customer service agent.

Many businesses have multiple sites and opening and closing gas and electricity accounts can be a costly exercise both in time and money, if not done correctly from the start. Our market knowledge is extensive, we can help you to add, close, energise or de-energise sites.

Let us know if you wish to upgrade to more energy efficient systems, we have made valuable collaborations with industry specialists. Depending on consumption, you may even be able to avail of a free energy saving audit to see where you can reduce energy output.

Green Electricity

We are proud to be able to acquire bespoke green electricity agreements for our customers. Green energy means it is powered by solar, bio, hydro or wind. Customers who choose green are not only reducing their carbon footprint they are also helping to protect our future.

Corporate governance is time consuming we can help by producing energy, carbon and sustainability reporting. In some instances we can actually issue you a green energy certificate to illustrate your company is consuming 100% renewable green energy.

Renewable Energy and Reducing Energy Consumption

National Energy will always try to create more value for their customer, which is why we have collaborated with industry leaders that specialise in providing renewable solutions and energy reducing equipment. If you are a customer of National Energy and you wish to upgrade to more efficient equipment or you wish to install a renewable energy solution like solar panels, wood chip burner, PHP system etc., we have negotiated discounts that you can avail of.

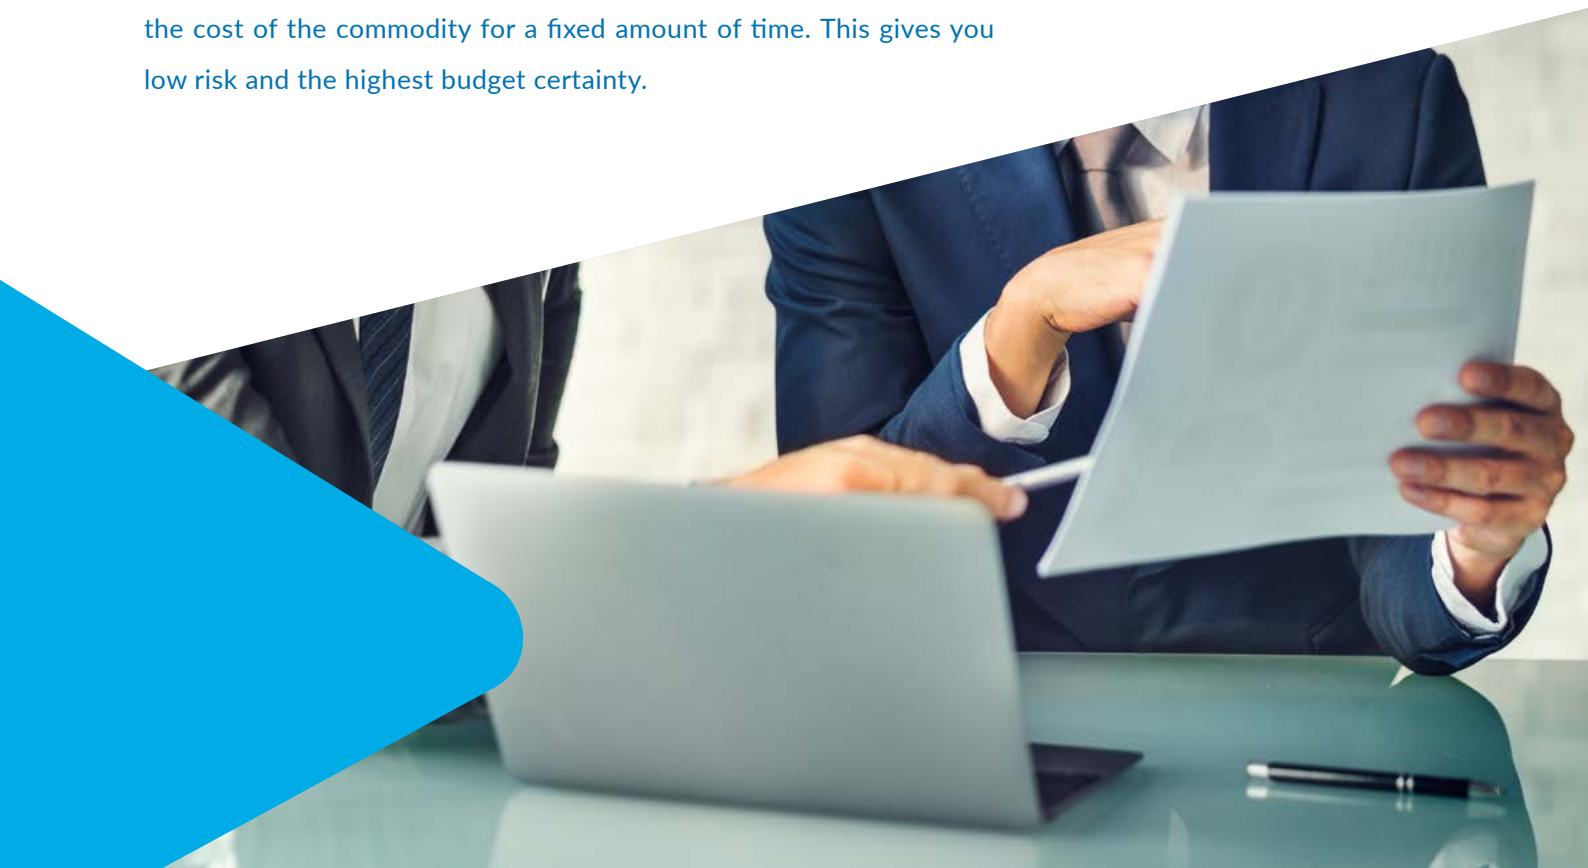

Invoice and Tariff Validations

Energy invoicing has arguably become more and more complex; many businesses have reported that validating their invoice is a confusing task especially when keeping up with changing pass-through charges every October. Billing errors are common, and on request we can ensure that any errors will be brought to your attention via our invoice validation report.

Tariff and MIC validation is carried out immediately on becoming a National Energy customers. This exercise can save your business thousands per annum.

Fixed Agreement

This type of agreement is very straight forward as you are simply fixing the cost of the commodity for a fixed amount of time. This gives you low risk and the highest budget certainty.

Risk Management and Flexible Agreements

Flexible agreements allow you to take advantage of market conditions. This is where the risk management comes in. Having an expert in this area is vital, as you must have someone with their finger on the pulse of the energy market ready to hedge prices when the time comes. We can create a tailor made strategy that automatically execute hedges based on certain market conditions and leading indicators.

Smart Meters

Monitor Your Energy Consumption

National Energy can help their customers to monitor and manage energy usage through smart meters. This gives you extra control over the various sections of your business.

Gain Insight

Being able to monitor, analyse and communicate energy consumption trends internally can bring substantial savings to the company.

Manage

Effective use of smart meters reduce the risk of consuming more electricity than you had budgeted for.
